Upcoming Events for Children

Purpose of the System

- The goal is to **digitize** and **streamline** key daycare tasks such as:
- **Recording daily attendance** of children
- **Tracking child profiles** and updates
- **Improving communication** between staff and guardians
- Ensuring compliance and accountability

 - Ritu Arora

Database Design

Cloudflare Integration: How It Works

- You point a subdomain (e.g. `cdn.team4.fsd13.ca`) to Cloudflare
- Cloudflare caches & serves `/uploads/*` content globally
- Update file paths:

`<!-- Before -->`

``

`<!-- After -->`

``

Cloudflare Integration: What & Why

Why Use Cloudflare?

Cloudflare acts as a **reverse proxy** and **CDN**, offering:

- ✓ Faster load times (via caching & global edge servers)
- ✓ Enhanced security (DDoS protection, SSL, firewall)
- ✓ DNS management with real-time updates
- ✓ Reduced bandwidth usage

◆ Main Domain & Subdomains:

- All A records for: amir, anatar, dang, david, dylan, evan, gregory, gregory2, haitao, khadis, louis, qi, rima, ritu, shao, team1, team2, team3, team4, and fsd13.ca
 - ✓ All pointing to 69.16.227.64
 - ✓ Proxy is enabled (good for caching/CDN)

◆ Essential Services:

- cdn.team4 → ✓ CNAME set correctly
- mail, ftp, webmail, cpanel, etc. → ✓ Present
- www → ✓ CNAME to fsd13.ca
- MX → ✓ fsd13.ca with priority 0 (for email)

◆ TXT Records:

- SPF → ✓ v=spf1 a mx ip4:69.16.227.64 ~all
- _acme-challenge records → ✓ Valid and intact
- _cpanel-dcv-test-record → ✓ Included
- CalDAV/CardDAV TXT paths → ✓ Present

◆ SRV Records:

- All related to email discovery, caldav, carddav → ✓ DNS only (correct behavior)

How We Set It Up

- Create Cloudflare Account
 - Add your domain (e.g., fsd13.ca)
- Import DNS Records
 - Cloudflare pulls existing records automatically
- Update Nameservers
 - At your domain registrar (e.g., **Domain Robot Enterprises Inc.**), replace the old nameservers (e.g., ns14.datona-1.com, ns15.datona-1.com) with Cloudflare's (e.g., bowen.ns.cloudflare.com, dora.ns.cloudflare.com)
- DNS Propagation Begins
 - Takes up to 24–48 hours globally
 - Use tools like [Google Dig](#) to confirm
- Traffic Routed via Cloudflare
 - Static files (e.g., images, CSS) now served from nearest edge server
 - Real-time control via Cloudflare dashboard (SSL, caching, security rules)

Records we found: 11 A 3 CNAME 1 MX 2 NS 5 SRV 9 TXT

 Our scan may have missed uncommon records or custom subdomains. Compare the list below to your current DNS provider (most likely your registrar) and add any missing records. Pay close attention to all records on the zone apex, records of the type A, AAAA, and CNAME and records needed for email like MX, SPF, DMARC, DKIM, and MTA-STS.

Your traffic is almost ready to proxy

 How proxying works

Your DNS records tell Cloudflare where your web content is hosted, so we can hide the origin and proxy your web traffic.

Proxied: HTTP traffic goes through the Cloudflare network. Required for services like caching, smart routing, and Web Application Firewall.

DNS only: HTTP traffic bypasses Cloudflare and goes directly to the origin, but DNS resolution still benefits from our fast and secure network. A gray cloud means proxying is off, no cloud means the record is not eligible for proxying.

Payment with Stripe PHP/API

- composer require stripe/stripe-php (More convenient if you're using PHP)

Fullcalendar.io

Standard Bundle

First, obtain the standard `fullcalendar` bundle in one of the following ways:

- **Download:** `fullcalendar-6.1.15.zip`
- **CDN:** `jsdelivr`
- **NPM:** `npm install fullcalendar`

Then, write the following initialization code:

```
<!DOCTYPE html>
<html lang='en'>
  <head>
    <meta charset='utf-8' />
    <script src='https://cdn.jsdelivr.net/npm/fullcalendar@6.1.15/index.global.min.js'></script>
    <script>

      document.addEventListener('DOMContentLoaded', function() {
        var calendarEl = document.getElementById('calendar');
        var calendar = new FullCalendar.Calendar(calendarEl, {
          initialView: 'dayGridMonth'
        });
        calendar.render();
      });

    </script>
  </head>
  <body>
    <div id='calendar'></div>
  </body>
</html>
```

```
// JSON API for fetching events (for FullCalendar)
$app->get('/events/fetch', function (Request $request, Response $response) {
    $events = DB::query(
        "SELECT * FROM events
        WHERE isDeleted = 0
        ORDER BY start_date"
    );

    $formattedEvents = array_map(function($event) {
        return [
            'id' => $event['id'],
            'title' => $event['title'],
            'start' => $event['start_date'],
            'end' => $event['end_date'],
            'description' => $event['description'] ?? ''
        ];
    }, $events);

    $responseData = json_encode($formattedEvents);
    $response->getBody()->write($responseData);
    return $response->withHeader('Content-Type', 'application/json');
});
```

23	24	25	26	27	28 ● 9a Presentation Day!!	29
30 ● 8:40a Pajama day!	31	1	2	3	4	5

Renaming the File
- Facial Recognition in
the Future!

Or use Webcam

Capture Photo

Close Webcam

```
// Capture photo from webcam
document.getElementById('capture-btn').addEventListener('click', function(){
  const video = document.getElementById('webcam');
  const canvas = document.getElementById('captured-canvas');
  const context = canvas.getContext('2d');
  context.drawImage(video, 0, 0, canvas.width, canvas.height);
  canvas.style.display = 'block';
  video.style.display = 'none';
  document.getElementById('captured_image').value = canvas.toDataURL('image/png');
  document.getElementById('capture-btn').style.display = 'none';
  document.getElementById('reset-btn').style.display = 'inline-block';
});
```

```
$capturedImage = trim(string: $data['captured_image'] ?? '');
if (!empty($capturedImage)) {
  // Expected format: "data:image/png;base64,...."
  $parts = explode(separator: ',', string: $capturedImage);
  if (count(value: $parts) === 2) {
    $imageData = base64_decode(string: $parts[1]);
    // Sanitize child's name: convert to lowercase and replace spaces with underscores
    $sanitizedChildName = strtolower(string: str_replace(search: ' ', replace: '_', subject: $name));
    // Create a unique filename using the child's sanitized name and the current timestamp
    $filename = $sanitizedChildName . '-' . time() . '.png';
    // Save the file to the uploads directory
    file_put_contents(filename: __DIR__ . '/../uploads/' . $filename, data: $imageData);
    // Set the photo path to be saved in the database
    $photoPath = $filename;
  }
}
```

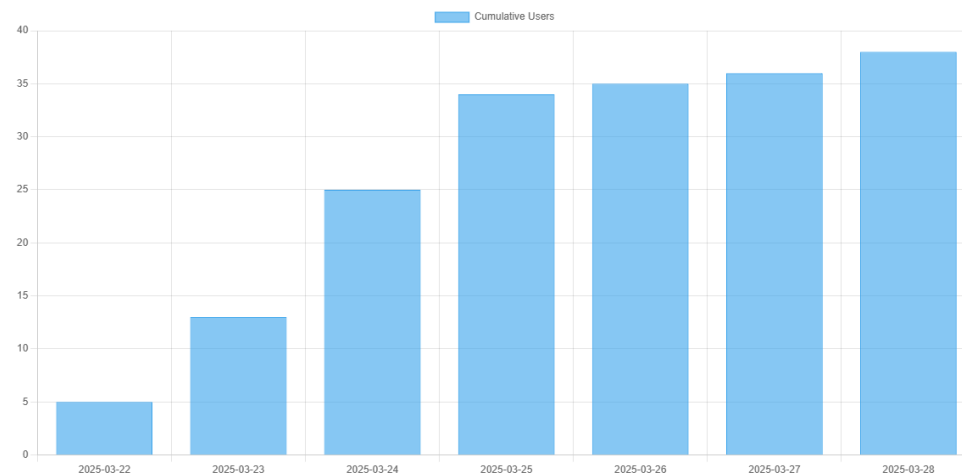

Data Visualization

- Chart.js library
- Pass PHP-generated arrays directly to the JS code using Twig's `json_encode`.
- dynamic and interactive

```
// Bar Chart for Cumulative User Growth
const cumulativeDates = [{ cumulativeDates|json_encode|raw }];
const cumulativeCounts = [{ cumulativeCounts|json_encode|raw }];

const ctxUser = document.getElementById('userGrowthChart').getContext('2d');
new Chart(ctxUser, {
  type: 'bar',
  data: {
    labels: cumulativeDates,
    datasets: [{
      label: 'Cumulative Users',
      data: cumulativeCounts,
      backgroundColor: 'rgba(54, 162, 235, 0.6)',
      borderColor: 'rgba(54, 162, 235, 1)',
      borderWidth: 1
    }]
  },
  options: {
    scales: {
      y: { beginAtZero: true }
    }
  }
});
```

Cumulative User Growth (Last 7 Days)

Flexible Data Retrieval

- LIKE operator
- % wild card
- Ensure soft deleted case
- More forgiving experience

        ", parameters: [$ed['id']]);
        $educatorData[] = ['educator' => $ed, 'children' => $children];
    }
}
```

Future work

Social Login Integration (Google/Facebook)

- OAuth-based login flow
- Google/Facebook login setup pending for **Parent Dashboard**
- Will improve convenience & reduce login friction

Multi-Language Support

- Enable language switching (e.g., English/French)
- Make the system accessible to a broader user base and comply with bilingual requirements.

Summary

- **User Registration & Login**

Role-based signup with email activation, profile photo upload, password reset, and secure login.

- **Role-Based Access Control**

Different dashboards and features for Parents, Educators, and Managers.

- **Child & Attendance Management**

Educators can view assigned children, mark daily attendance, and track attendance history.

- **Manager Features**

Overview dashboard with key stats, educator-child assignments, and event scheduling (partially done).

- **Security & Enhancements**

ReCaptcha protection, mobile-responsive design, dynamic attendance charts.

Thank you :)
